

## What you should know about Bermex solid wood furniture

Each tree is unique. Therefore, solid wood furniture cannot be uniform when it comes to finish. Uniqueness makes the beauty of wood.

- ✓ North American Birch is perfectly suited for our climate
- ✓ Kiln-dried at 7% humidity
- ✓ Wood lamination from 3/4" to 2 3/4" for maximum protection against warping
- ✓ Solid cross bars against wood grain for maximum solidity
- ✓ Can be repaired and restored to original beauty as opposed to veneer
- ✓ Bermex solid wood is like nature... please no chemicals, a damp cloth is all that is required

**Solid wood is a timeless investment!**

Design it your way

# Green Friendly

**We care about our future &  
Our future begins with trees**

Being a furniture manufacturer you can understand that this of the utmost importance to us. Without trees we don't exist:

- ↻ Each tree that is used to manufacture Bermex furniture is processed with supplies that care about our future environment.
- ↻ Bermex totally supports the process of a new tree being planted every time one is cut down.
- ↻ Bermex makes special efforts to make sure that all pieces of wood cut away in the production process are used in the production of sales tools and other items.
- ↻ Bermex is forever looking for and implementing new ways to recycle paper. Whenever possible every sheet of paper is used twice before finding the recycling bin from photocopies, print-ups to note pads.
- ↻ A recycling procedure is enforced in our factories in the finishing of our furniture.

**Be environmentally friendly  
Be smart  
Be green**
